SKILLS

- **Languages & Core:** JavaScript (ES6+), TypeScript, HTML5, CSS3
- **Frameworks & Libraries:** React.js, Next.js, Redux Toolkit, RTK Query, React Query
- **Architecture & Build Tools:** Micro-Frontends (Module Federation), Webpack, Vite.js, Rollup, Monorepo Management
- **Advanced Web Technologies:** WebSockets, HTML5 Canvas API, Web Workers, IndexedDB (Dexie.js), Electron.js
- **UI Engineering & Visualization:** Tailwind CSS, Material-UI, Leaflet.js, Chart.js, Highcharts
- **DevOps & Monitoring:** Git, CI/CD, Verdaccio, Sentry, Performance Profiling

EXPERIENCE

- **Soroush Hamrah** On-site
Front-End Software Engineer Dec 2024 – Present
 - **Micro-Frontend Architecture:** Spearheaded the migration of a monolithic frontend to a Micro-Frontend architecture using **Webpack Module Federation**, enabling independent deployment life-cycles and reducing build times by 60%.
 - **Build Pipeline Optimization:** Engineered scalable build tools using **Vite.js** for rapid local development and **Rollup** for internal UI package bundling, significantly improving Developer Experience (DX).
 - **CI/CD & Package Management:** Automated internal package distribution by integrating Verdaccio within CI/CD pipelines, streamlining updates across 5+ micro-applications.
 - **Legacy System Integration:** Architected bridging solutions between modern React ecosystems and legacy JSF/jQuery applications, ensuring seamless data flow and zero downtime during incremental modernizations.
- **Space Omid** On-site
Front-End Software Engineer Oct 2023 – Dec 2024
 - **Real-Time & Geospatial Systems:** Architected low-latency tracking features handling [e.g., 1000+] concurrent events per second using **WebSockets** (Socket-Cluster) and interactive mapping via **Leaflet.js**.
 - **High-Performance UI:** Engineered complex pixel manipulation tools utilizing the HTML5 **Canvas API**, bypassing DOM rendering bottlenecks to achieve smooth 60fps performance for heavy data sets.
 - **Offline-First Architecture:** Designed cross-platform desktop solutions using **Electron.js** and implemented robust offline caching layers with **IndexedDB**, guaranteeing continuous operation during network failures.
 - **State & Cache Management:** Optimized application state and network payloads using **RTK Query** and **React Query**, reducing redundant API calls by [e.g., 30%] and accelerating data hydration.
 - **Reliability & Monitoring:** Integrated **Sentry** for real-time telemetry and error tracking, decreasing Mean Time To Resolution (MTTR) for critical frontend bugs by [e.g., 50%].
- **Maktab Sharif** Remote
Front-End Developer Feb 2023 – Oct 2023
 - **Component Architecture:** Developed highly reusable, accessible, and responsive React components, establishing a scalable foundation for future product iterations.
 - **UI Standards:** Enforced strict CSS architectures (**BEM**, **OOCSS**) to ensure maintainability and eliminate style bleed across large codebases.
 - **Agile Delivery:** Collaborated in cross-functional Agile environments, driving feature delivery from technical design to production deployment.

OPEN SOURCE CONTRIBUTIONS

- **Redux-Toolkit (Core State Management):** Provided architectural solutions for complex cache invalidation and state synchronization issues within the official repository. (View GitHub)
- **React-Leaflet & Canvas Optimization:** Engineered optimized algorithms for reading pixel values directly from ImageOverlays during high-frequency mouse events, solving community-wide performance bottlenecks. (View Stack Overflow)
- **Mozilla Firefox (Core Rendering Engine):** Identified, documented, and reported edge-case layout rendering bugs directly to the Mozilla engineering team via Bugzilla. (View Bugzilla)

EDUCATION

- **Azad University** Iran
Bachelor of Software Engineering 2022 – Present
